

Indoor / Outdoor Pest Control Prep Sheet

***generally, your Initial visit or if you request interior treatment be added to one of your recurring visits.**

When this checklist is followed, our treatments work faster and are more effective for longer. If you have any questions or concerns, please call our office 1-800-454-5837.

Ants, spiders, earwigs, silverfish, crickets

- Remove everything from under the sink areas in the kitchen, bathrooms, and laundry room.
- Make sure everything is off the floor (i.e., clothes, toys, etc.) and move light furniture 18 inches away from the baseboards (so we can inspect/spray behind it)
- Remove all pets from home before we arrive, if you have a fish tank; cover it with a sheet or towel and unplugged the pump for the duration of our treatment.
- Leave a few windows open (unless asked to do otherwise by technician)

PEOPLE AND PETS NEED TO VACATE TREATED AREAS FOR 2 HRS TO ALLOW OUR PRODUCTS TO DRY.

When you return, please be sure all treated areas are completely dry. All food preparation surfaces **MUST** be wiped down with SOAP and WATER prior to any food preparation.

DO NOT CLEAN OR MOP WITH ANY DETERGENTS OR BLEACH FOR 48HRS as bleach and cleansers tend to neutralize and lessen the effectiveness of the products we are using. Do not be alarmed if you see increased pest activity over the next 7 days, our treatments have a transfer effect that causes movement and allows them to carry it back to their nest.

Try not to miss or delay any of your scheduled treatments. Maintaining your pest barrier regularly is the best way to stop infestations and allow us to keep your pest problems under control. If you have any questions, please call 1-800-454-5837.
